

AMENDMENTS TO THE CLAIMS

Please amend the claims as follows. This listing of claims shall replace all prior versions and listings of the claims.

1. **(Previously Presented)** A method, comprising:

receiving, by at least one processor of a computer, one or more first type of bets, each first type having an associated bet amount and comprising a bet that the total number of units earned by a particular participant over a course of a plurality of events will fall within a first range of numbers, wherein:

the particular participant is selected from a plurality of participants each participating in at least one of the plurality of events; and

for each of the plurality of events, a plurality of units are allocated among participants according to a respective finishing position of each participant;

receiving, by the at least one processor, one or more second type of bets, each second type of bet having an associated bet amount and comprising a second bet that the total number of units earned by the particular participant in the plurality of events will fall within a second range of numbers;

determining, by the at least one processor, the total number of units earned by the particular participant over the course of the plurality of events;

determining, by the at least one processor, whether the first type of bets or the second type of bets are winning bets based at least in part on whether the total number of units earned by the particular participant falls within the first range of numbers or the second range of numbers;

determining, by the at least one processor, a betting pool based at least in part on the total of the bet amounts associated with the first type of bets and the total of the bet amounts associated with the second type of bets; and

determining, by the at least one processor, an amount of a payout based at least in part on the betting pool and the total of the bet amounts associated with the winning bets.

2-16. **(Cancelled).**

17. **(Previously Presented)** An apparatus, comprising:
 - at least one processor; and
 - memory storing computer instructions that, when executed by the at least one processor, cause the at least one processor to:
 - receive one or more first type of bets, each first type having an associated bet amount and comprising a bet that the total number of units earned by a particular participant over a course of a plurality of events will fall within a first range of numbers, wherein:
 - the particular participant is selected from a plurality of participants each participating in at least one of the plurality of events; and
 - for each of the plurality of events, a plurality of units are allocated among participants according to a respective finishing position of each participant;
 - receive one or more second type of bets, each second type of bet having an associated bet amount and comprising a second bet that the total number of units earned by the particular participant in the plurality of events will fall within a second range of numbers;
 - determine the total number of units earned by the particular participant over the course of the plurality of events;
 - determine whether the first type of bets or the second type of bets are winning bets based at least in part on whether the total number of units earned by the particular participant falls within the first range of numbers or the second range of numbers;
 - determine a betting pool based at least in part on the total of the bet amounts associated with the first type of bets and the total of the bet amounts associated with the second type of bets; and
 - determine an amount of a payout based at least in part on the betting pool and the total of the bet amounts associated with the winning bets.

18-52. (Canceled).

53. (Previously Presented) A method, comprising:
determining, by at least one processor of a computer, an index number representing a predicted total number of units that could be earned by a particular jockey in a plurality of horse races;

determining, by the at least one processor, at least a first range of numbers and a second range of numbers based at least in part on the index number;

causing, by the at least one processor, index bets to be offered to bettors, wherein the index bets comprise:

a first type of bet, wherein the first type of bet comprises a bet that a total number of units earned by the particular jockey in the plurality of horse races will fall within the first range of numbers; and

a second type of bet, wherein the second type of bet comprises a bet that the total number of units earned by the particular jockey in the plurality of horse races will fall within the second range of numbers;

receiving, by the at least one processor, one or more first bets, wherein each first bet of the one or more first bets has a respective associated bet amount and each first bet of the one or more first bets comprises the first type of bet;

receiving, by the at least one processor, one or more second bets, wherein each second bet of the one or more second bets has a respective associated bet amount and each second bet of the one or more second bets comprises the second type of bet;

for each horse race, of the plurality of horse races, in which the particular jockey participated, receiving, by the at least one processor, a respective result of the horse race, the respective result comprising a respective final position of the particular jockey in the horse race;

determining, by the at least one processor, the total number of units earned by the particular jockey in the plurality of horse races, wherein determining the total number of units comprises:

for each horse race, of the plurality of horse races, in which the particular jockey participated, determining, by the at least one processor, a respective number of units earned by the particular jockey in the horse race based at least in part on at least one of:

the respective final position of the particular jockey in the horse race, and

a unit distribution structure defining a distribution of units over a plurality of positions in the horse race;

determining, by the at least one processor, whether the one or more first bets or the one or more second bets are winning bets based at least in part on whether the total number of units earned by the particular jockey in the plurality of horse races falls within the first range of numbers or the second range of numbers;

determining, by the at least one processor, a betting pool based at least in part on a total of the respective associated bet amounts of the one or more first bets and the one or more second bets; and

determining, by the at least one processor, an amount of a payout based at least in part on the betting pool and a total of any bet amounts associated with any winning bets.

54. **(Previously Presented)** The method of claim 53, wherein determining the total number of units earned by the particular jockey comprises:

determining, by the at least one processor, an amount of money earned by the particular jockey in the plurality of horse races.

55. **(Previously Presented)** The method of claim 53, wherein determining at least the first range of numbers and the second range of numbers based at least in part on the index number comprises:

defining, by the at least one processor, the first range of numbers as the range of numbers between the index number and a number less than the index number; and

defining, by the at least one processor, the second range of numbers as the range of numbers between the index number and a number greater than the index number.

56. **(Previously Presented)** The method of claim 53, wherein the index bets further comprise:

a third type of bet, wherein the third type of bet comprises a bet that the total number of units earned by the particular jockey in the plurality of horse races will fall within a third range of numbers;

and

wherein the method further comprises:

receiving, by the at least one processor, one or more third bets, wherein each third bet of the one or more third bets has a respective associated bet amount and each third bet of the one or more third bets comprises the third type of bet;

and

wherein determining the betting pool comprises:

determining, by the at least one processor, the betting pool based at least in part on a total of the respective associated bet amounts of the one or more first bets, the one or more second bets, and one or more third bets;

and

wherein determining whether the one or more first bets or the one or more second bets are winning bets comprises:

determining, by the at least one processor, whether the one or more first bets, the one or more second bets, or the one or more third bets are winning bets based at least in part on whether the total number of units earned by the particular jockey in the plurality of horse races falls within the first range of numbers, the second range of numbers, or the third range of numbers.

57. **(Previously Presented)** The method of claim 56, wherein the index bets further comprise:

a fourth type of bet, wherein the fourth type of bet comprises a bet that the total number of units earned by the particular jockey in the plurality of horse races will fall within a fourth range of numbers;

and

wherein the method further comprises:

receiving, by the at least one processor, one or more fourth bets, wherein each fourth bet of the one or more fourth bets has a respective associated bet amount and each fourth bet of the one or more fourth bets comprises the fourth type of bet;

and

wherein determining the betting pool comprises:

determining, by the at least one processor, the betting pool based at least in part on a total of the respective associated bet amounts of the one or more first bets, the one or more second bets, the one or more third bets, and the one or more fourth bets;

and

wherein determining whether the one or more first bets, the one or more second bets, or the one or more third bets are winning bets comprises:

determining, by the at least one processor, whether the one or more first bets, the one or more second bets, the one or more third bets, or the one or more fourth bets are winning bets based at least in part on whether the total number of units earned by the particular jockey in the plurality of horse races falls within the first range of numbers, the second range of numbers, the third range of numbers, or the fourth range of numbers.

58. **(Previously Presented)** The method of claim 56, wherein determining at least the first range of numbers and the second range of numbers based at least in part on the index number comprises:

determining, by the at least one processor, at least the first range of numbers, the second range of numbers, and the third range of number based at least in part on the index number, wherein determining at least the first range of numbers, the second range of numbers, and the third range of numbers comprises:

defining, by the at least one processor, the first range of numbers as the range of numbers between a first number and a second number;

defining, by the at least one processor, the second range of numbers as the range of numbers between the second number and a third number; and

defining, by the at least one processor, the third range of numbers as the range of numbers between the third number and a fourth number; and

wherein the index number falls within at least one of the first range of numbers, second range of numbers, and the third range of numbers.

59. **(Currently Amended)** The method of claim 53,
wherein determining the total number of units earned by the particular jockey in the plurality of horse races comprises:

for each horse race, of the plurality of horse races, in which the particular jockey participated, determining, by the at least one processor, a respective number of units earned by the particular jockey in the horse race based at least in part on:

a unit distribution structure defining a distribution of units over a plurality of positions in the horse race; and

wherein the unit distribution structure comprises a purse distribution structure defining a distribution of a purse over a plurality of positions in the horse race.

60. **(Previously Presented)** The method of claim 53, further comprising:
after one or more horse races of the plurality of horse races has occurred,
causing, by the at least one processor, additional index bets to be offered to bettors, wherein the additional index bets comprise:

a third type of bet, wherein the third type of bet comprises a bet regarding a total number of units earned by the particular jockey in the plurality of horse races excluding the one or more horse races that have occurred will fall within the first range of numbers;

and

receiving, by the at least one processor, one or more third bets, wherein each third bet of the one or more third bets has a respective associated bet amount and each third bet of the one or more third bets comprises the third type of bet.

61. **(Previously Presented)** The method of claim 60, wherein the third type of bet locks in a particular gain or loss associated with at least one of the first type of bet and the second type of bet.

62. **(Previously Presented)** The method of claim 53, further comprising: after one or more horse races of the plurality of horse races has occurred, for a particular first bet of the one or more first bets:

receiving, by the at least one processor, a request to settle the particular first bet;

determining, by the at least one processor, an amount of a settlement payment for the particular first bet based at least in part on the respective finishing position of the particular jockey in each of the one or more horse races that has occurred;

paying out, by the at least one processor, the settlement payment; and
canceling, by the at least one processor, the particular first bet.

63. **(Cancelled)** The method of claim 53, wherein the plurality of horse races occur over an extended period of time.

64. **(Previously Presented)** The method of claim 53, wherein the plurality of horse races occur over a period of time greater than one week.

65. **(Previously Presented)** An apparatus, comprising:
at least one processor; and
memory storing computer instructions that, when executed by the at least one processor, cause the at least one processor to:

determine an index number representing a predicted total number of units that could be earned by a particular jockey in a plurality of horse races;

determine at least a first range of numbers and a second range of numbers based at least in part on the index number;

cause index bets to be offered to bettors, wherein the index bets comprise:

a first type of bet, wherein the first type of bet comprises a bet that a total number of units earned by the particular jockey in the plurality of horse races will fall within the first range of numbers; and

a second type of bet, wherein the second type of bet comprises a bet that the total number of units earned by the particular jockey in the plurality of horse races will fall within the second range of numbers;

receive one or more first bets, wherein each first bet of the one or more first bets has a respective associated bet amount and each first bet of the one or more first bets comprises the first type of bet;

receive one or more second bets, wherein each second bet of the one or more second bets has a respective associated bet amount and each second bet of the one or more second bets comprises the second type of bet;

for each horse race, of the plurality of horse races, in which the particular jockey participated, receive a respective result of the horse race, the respective result comprising a respective final position of the particular jockey in the horse race;

determine the total number of units earned by the particular jockey in the plurality of horse races, wherein determining the total number of units comprises:

for each horse race, of the plurality of horse races, in which the particular jockey participated, determining a respective number of units earned by the particular jockey in the horse race based at least in part on at least one of:

the respective final position of the particular jockey
in the horse race, and

a unit distribution structure defining a distribution of
units over a plurality of positions in the horse race;

determine whether the one or more first bets or the one or more second bets
are winning bets based at least in part on whether the total number of units earned
by the particular jockey in the plurality of horse races falls within the first range of
numbers or the second range of numbers;

determine a betting pool based at least in part on a total of the respective
associated bet amounts of the one or more first bets and the one or more second
bets; and

determine an amount of a payout based at least in part on the betting pool
and a total of any bet amounts associated with any winning bets.

66. **(Previously Presented)** The apparatus of claim 65, wherein determining
the total number of units earned by the particular jockey comprises:

determining an amount of money earned by the particular jockey in the plurality of
horse races.

67. **(Previously Presented)** The apparatus of claim 65, wherein determining at
least the first range of numbers and the second range of numbers based at least in part on
the index number comprises:

defining the first range of numbers as the range of numbers between the index
number and a number less than the index number; and

defining the second range of numbers as the range of numbers between the index
number and a number greater than the index number.

68. **(Previously Presented)** The apparatus of claim 65, wherein the index bets
further comprise:

a third type of bet, wherein the third type of bet comprises a bet that the total number of units earned by the particular jockey in the plurality of horse races will fall within a third range of numbers;

and

wherein the computer instructions, when executed by the at least one processor, further cause the at least one processor to:

receive one or more third bets, wherein each third bet of the one or more third bets has a respective associated bet amount and each third bet of the one or more third bets comprises the third type of bet;

and

wherein determining the betting pool comprises:

determining the betting pool based at least in part on a total of the respective associated bet amounts of the one or more first bets, the one or more second bets, and one or more third bets;

and

wherein determining whether the one or more first bets or the one or more second bets are winning bets comprises:

determining whether the one or more first bets, the one or more second bets, or the one or more third bets are winning bets based at least in part on whether the total number of units earned by the particular jockey in the plurality of horse races falls within the first range of numbers, the second range of numbers, or the third range of numbers.

69. **(Previously Presented)** The apparatus of claim 68, wherein the index bets further comprise:

a fourth type of bet, wherein the fourth type of bet comprises a bet that the total number of units earned by the particular jockey in the plurality of horse races will fall within a fourth range of numbers;

and

wherein the computer instructions, when executed by the at least one processor, further cause the at least one processor to:

receive one or more fourth bets, wherein each fourth bet of the one or more fourth bets has a respective associated bet amount and each fourth bet of the one or more fourth bets comprises the fourth type of bet;

and

wherein determining the betting pool comprises:

determining the betting pool based at least in part on a total of the respective associated bet amounts of the one or more first bets, the one or more second bets, the one or more third bets, and the one or more fourth bets;

and

wherein determining whether the one or more first bets, the one or more second bets, or the one or more third bets are winning bets comprises:

determining whether the one or more first bets, the one or more second bets, the one or more third bets, or the one or more fourth bets are winning bets based at least in part on whether the total number of units earned by the particular jockey in the plurality of horse races falls within the first range of numbers, the second range of numbers, the third range of numbers, or the fourth range of numbers.

70. **(Previously Presented)** The apparatus of claim 68, wherein determining at least the first range of numbers and the second range of numbers based at least in part on the index number comprises:

determining at least the first range of numbers, the second range of numbers, and the third range of number based at least in part on the index number, wherein determining at least the first range of numbers, the second range of numbers, and the third range of numbers comprises:

defining the first range of numbers as the range of numbers between a first number and a second number;

defining the second range of numbers as the range of numbers between the second number and a third number; and

defining the third range of numbers as the range of numbers between the third number and a fourth number; and

wherein the index number falls within at least one of the first range of numbers, second range of numbers, and the third range of numbers.

71. **(Currently Amended)** The apparatus of claim 65,
wherein determining the total number of units earned by the particular jockey in the plurality of horse races comprises:

for each horse race, of the plurality of horse races, in which the particular jockey participated, determining, by the at least one processor, a respective number of units earned by the particular jockey in the horse race based at least in part on a unit distribution structure defining a distribution of units over a plurality of positions in the horse race; and

wherein the unit distribution structure comprises a purse distribution structure defining a distribution of a purse over a plurality of positions in the horse race.

72. **(Previously Presented)** The apparatus of claim 65, wherein the computer instructions, when executed by the at least one processor, further cause the at least one processor to:

after one or more horse races of the plurality of horse races has occurred,

cause additional index bets to be offered to bettors, wherein the additional index bets comprise:

a third type of bet, wherein the third type of bet comprises a bet regarding a total number of units earned by the particular jockey in the plurality of horse races excluding the one or more horse races that have occurred will fall within the first range of numbers;

and

receive one or more third bets, wherein each third bet of the one or more third bets has a respective associated bet amount and each third bet of the one or more third bets comprises the third type of bet.

73. (**Previously Presented**) The apparatus of claim 72, wherein the third type of bet locks in a particular gain or loss associated with at least one of the first type of bet and the second type of bet.

74. (**Previously Presented**) The apparatus of claim 65, wherein the computer instructions, when executed by the at least one processor, further cause the at least one processor to:

 after one or more horse races of the plurality of horse races has occurred, for a particular first bet of the one or more first bets:

 receive a request to settle the particular first bet;

 determine an amount of a settlement payment for the particular first bet

 based at least in part on the respective finishing position of the particular jockey in each of the one or more horse races that has occurred;

 pay out the settlement payment; and

 cancel the particular first bet.

75. (**Cancelled**)

76. (**Previously Presented**) The apparatus of claim 65, wherein the plurality of horse races occur over a period of time greater than one week.

77. (**New**) The method of claim 53, in which determining the total number of units earned by the particular jockey in the plurality of horse races comprises:

 for each horse race, of the plurality of horse races, in which the particular jockey participated, determining, by the at least one processor, a respective number of units earned by the particular jockey in the horse race based at least in part on:

 the respective final position of the particular jockey in the horse race, and

a unit distribution structure defining a distribution of units over a plurality of positions in the horse race.

78. (New) The apparatus of claim 65, in which the act of determining the total number of units earned by the particular jockey in the plurality of horse races comprises:

for each horse race, of the plurality of horse races, in which the particular jockey participated, determining a respective number of units earned by the particular jockey in the horse race based at least in part on:

the respective final position of the particular jockey in the horse race, and

a unit distribution structure defining a distribution of units over a plurality of positions in the horse race.
